Nutritional Support of Cats with Triaditis

Sarah Collins DipAVN(Medical) RVN VTS(ECC) Cert SAN Cert CFVHNut

1. Triaditis is a term used to describe the presence of inflammation in:
   a) Liver, kidney, pancreas
   b) Pancreas, liver, small intestine
   c) Kidney, pancreas, small intestine
   d) Heart, lungs, liver

2. In published studies to date, how many cats investigated demonstrated triaditis?
   a) 30-39%
   b) 20-29%
   c) 40-49%
   d) 10-19%

3. Which of the following is NOT true for cats with pancreatitis?
   a) Nutrition should be provided once vomiting is controlled
   b) Diets should be highly digestible
   c) Diets should be fat restricted
   d) Pancreatitis is related to premature intracellular activation of enzymes

4. Assisted feeding should be considered in patients that are consuming less than which percentage of their resting energy requirement?
   a) 100%
   b) 95%
   c) 80%
   d) 90%

5. How quickly would a positive response to a hypoallergenic diet be expected in cats with IBD?
   a) Within 2-3 months
   b) Within 2-3 weeks
   c) Within 2-3 days
   d) Within 2-3 years

6. Gluten free carbohydrate sources are no longer considered relevant in diets for cats with IBD:
   a) True
   b) False
7. Which of the following would not be used for enteral feeding?
   a) Naso-oesophageal tube
   b) Oesophageal tube
   c) Central venous line
   d) Gastrostomy tube

8. Biaditis is more commonly encountered in cats than triaditis. Which combination is most common?
   a) Cholangitis and pancreatitis
   b) Cholangitis and IBD
   c) Pancreatitis and IBD
