Early Neutering in Cats with the use of the Quad Anaesthetic Protocol
Niamh Clancy DipVN DipHE CVN DipAVN(Small Animal) RVN

1. What has been the suggested best time for neutering, according to recent literature?
   a) 6-12 wks
   b) 4-8 wks
   c) 12-16 wks
   d) 16-20 wks

2. Which of these is NOT a beneficial side effect of early neutering?
   a) Low rate of post-operative infection
   b) Decreased risk of feline asthma
   c) Decreased risk of gingivitis
   d) Decreased risk of Feline Infectious Peritonitis

3. What is the weight restriction for the use of the quad anaesthetic protocol
   a) 3 Kg
   b) 2 Kg
   c) 1 Kg
   d) 1.5 Kg

4. Which of these is the correct drug combination for the quad anaesthetic protocol?
   a) Midazolam/ ketamine/ butorphanol/ medetomidine
   b) Diazepam/ ketamine/ buprenorphine/ medetomidine
   c) Midazolam/ fentanyl/ buprenorphine/ medetomidine
   d) Midazolam/ ketamine/ buprenorphine/ medetomidine
5. How long should kittens be fasted for?
   a) 1 hour
   b) 2 hours
   c) 3 hours
   d) 4 hours

6. At which phase do the majority of anaesthetic deaths occur?
   a) Pre-medication
   b) Induction
   c) Intra-operation
   d) Recovery

7. Which of these is NOT a negative side effect of pain?
   a) Immunosuppression
   b) Central nervous system sensitisation
   c) Hypotension
   d) Chronic pain

8. How is the quad anaesthetic protocol administered?
   a) Sub-cutaneous
   b) Intramuscular
   c) Intravenous
